

Saba & Ignite: An Enterprise-Wide Approach to e-Learning

The integration of the Saba Learning Suite and Ignite's Content Delivery Solution helps you optimize your e-Learning initiatives. Whether you are training employees, contractors, partners, suppliers or customers, Saba and Ignite give you the tools you need to rapidly and efficiently create and deliver content – without worrying about how to deliver it or if your network can handle it.

The Challenge

In today's global economy, it is increasingly difficult to manage your company's most valuable asset – its people. How can you:

- Ensure that everyone in your organization has the skills and knowledge they need to achieve peak performance?
- Avoid the high costs of distributing CDs and DVDs or hosting live training sessions?
- Ensure that everyone is using the latest versions of your training materials?

If you have been relying on fragmented systems and technologies to meet your diverse training needs, you are not alone. The good news is that there is a better way.

The Solution

With the Saba/Ignite solution, you can efficiently and economically manage the entire lifecycle of content creation and delivery, including the ability to securely send HD-quality video, PDF files, presentations, and other training content:

- **To Anyone.** Your e-Learning resources are only valuable if people use them. Improve viewing rates and retention by delivering engaging, interactive training content as often as necessary, without network congestion.
- **Anywhere.** Distribute digital content just as easily to a field office with a dial-up connection as to a headquarters office with high-speed excess bandwidth. All communications can be viewed both online and offline for maximum flexibility.

- **At Any Time.** You no longer need to rely on your company's IT department for distribution of large media files. You can use the Saba/Ignite web-based administration module to target training content to your entire workforce or to specific groups on a scheduled delivery date or on demand.

Benefits

Multi-Level Security – Protect your content during targeting, delivery, receipt, and use with multiple security barriers to help prevent unauthorized viewing, duplication or altering of content. Content can even be automatically deleted from employees' laptops whenever their employment is terminated so your intellectual property doesn't fall into the hands of your competitors.

Global Reach – Communicate with anyone, anywhere, at any time – regardless of bandwidth constraints. Allow everyone in your target audience to receive the same content at the same time, with the same high-caliber viewing experience.

Complete Control – Manage and track all deliveries, obtain feedback, and generate extensive reports.

Multimedia Flexibility – Send the highest-quality content available – from video to PDF to PowerPoint. Deliver training materials without negatively impacting your network or employees' computers and enable recipients to view content at any time, anywhere – online or offline.

Precise Targeting - Pinpoint the delivery of content to whom and to where it's needed by performing criteria-based distributions.

Cost-Effectiveness - Leverage your existing network infrastructure with Ignite and Saba. Keep costs to a minimum by eliminating need for travel, meeting facilities, audio conferences, and media fulfillment.

The Saba/Ignite solution also gives you the ability to monitor the effectiveness of your communications with powerful tracking, monitoring, and reporting capabilities, so you can easily quantify the results of your e-Learning efforts. You can also create surveys to attach to your content to gather end-user feedback and generate reports showing company-wide statistics on the viewing rate of all training materials.

Content Delivery

A TOTAL ENTERPRISE SOLUTION

Achieve Your e-Learning Objectives

The Saba/Ignite solution helps you overcome the many challenges you face so you can achieve your e-Learning objectives.

- **Version Control**
The ability to automatically update or upgrade existing files helps ensure users always have the latest version of your training materials.
- **Delivery Alerts**
The Saba/Ignite solution takes the guesswork out of notifying end users about training deliveries. For each delivery package, you have the ability to customize how you want the content to be delivered: pushed or pulled on demand. End users are notified via onscreen Delivery Alerts whenever new content has been delivered, and they can access this content via the Saba Learning Suite interface.
- **On-Demand Access**
Easy accessibility to information on demand means you don't have to reactively administer repeated training content and also leads to lower overall training costs.
- **Tracking**
With the Saba/Ignite solution, you can control and monitor the entire education lifecycle – online and offline – including the ability to see who has completed new training material and who has not started. Test scores and other user interactions are tracked for reporting purposes.
- **Assessment and Follow Up**
When a course has been completed and test results are available, Ignite can immediately deliver a new course or any necessary remedial training. If desired, Ignite can also automatically delete a completed course from the end user's computer.

Summary

The powerful combination of leading-edge technologies from Saba and Ignite provides a disciplined, strategic, and enterprise-wide approach to managing e-Learning for diverse audiences, including employees, contractors, partners, suppliers, and customers. With integrated Saba/Ignite solution, you can create, deliver, track, and report on e-Learning content at a fraction of the cost of traditional methods. You can also measure the effectiveness of your e-Learning materials through the solution's extensive tracking, monitoring, and reporting capabilities.
