

# Sensage AP

## System Log Event Data Warehouse

Collect massive amounts of data from many sources within your corporate network, and then retain for years or even decades by scaling your system horizontally — to meet compliance requirements and conduct faster, more sophisticated analytics on the data you own.

### Product Overview

An Event Data Warehouse technology that supports data collection from corporate network infrastructure for the purpose of audit, security and threat detection, as well as to support compliance requirements. It enables Security and Compliance officers to collect and analyze massive amounts of events data to fulfill policy and regulatory requirements. SenSage can be deployed on-premise, in a virtualized environment, or in the cloud.

### Solution Benefits

- Highly scalable Event Data Warehouse for massive data storage of log entries and time-series data.
- Retrieve and collect more data while storing it efficiently and without sacrificing the ability to query it easily.

## Solution Benefits

- Integrate with multiple data sources leveraging easily customizable log collectors and adapters.
- Retain data over longer periods of time, years or even decades thanks to a great compression ratio.
- Keep your data safe by ensuring to have in replicated and recoverable in case of hardware malfunction.
- Fulfill your compliance and/or regulatory requirements by having ability to retain logs for years or even decades.
- Leverage open standards such as ANSI SQL for querying data to enable sophisticated correlations with full precision, even on very large data sets.
- Connect your application with 3rd party software using PostgreSQL compatible endpoint.

## Use Case/Reference

### Customer Success

#### **A World Leader in Communications and Technology Leverages SenSage AP to Conform to Necessary Compliance Requirements**

#### Company

Telecommunications Company

#### Industry

Telecommunications  
Diversified Communication Svcs

#### Ignite Solutions

SensSage AP

#### Deployment

SaaS

#### Summary

SenSage AP is deployed within this telecommunication giant's infrastructure in multiple locations to help them collect logs from a magnitude of various systems operating on Linux Servers as well as Windows. The data is critical for the CSO ope to conform to necessary

#### Why SenSage AP

The customer had several compliance initiatives and internal requirements including the need to combine PCI, SOX, and GLBA compliance efforts, identify pattern anomalies for events, machines, and time frames and track user activity, privilege use, and sensitive data use. SenSage AP was able to integrate to these requirements and allow for further scalability developing their own billing and invoicing solution.

#### Member Benefit

The customer was able to capture events, machines, time and date, and severity to analyze and identify differences in average patterns (anomalies).

#### Customer Outcome

With SenSage AP this telecommunications company is able to self-audit to identify what reports have been reviewed and which investigations were run as well as comply with internal audit and strict corporate policy requirements.
